

# The Muscular System

There are hundreds of muscle groups in the human body. Some groups can be seen under the skin. Others are deep within the body. Muscles have the ability to contract, usually in response to messages from the nervous system. Use the terms in the word box to label these muscle groups.

- |           |                      |              |               |
|-----------|----------------------|--------------|---------------|
| pectorals | quadriceps           | deltoids     | gastrocnemius |
| biceps    | sternocleidomastoids | intercostals | triceps       |

# The Skeletal System

The skeletal system acts as our body's framework. The human adult skeleton has a total of 206 bones. Use the terms in the word box to label the major bones of the body.

- |         |        |          |          |           |          |
|---------|--------|----------|----------|-----------|----------|
| cranium | coccyx | patella  | pelvis   | femur     | clavicle |
| scapula | radius | mandible | rib cage | vertebrae | tibia    |
